Class Reccomendations

Trevor Vaughn

November 10, 2026

#	**Class**	**Number**	**Professor(s)**	**Semester**
1	Spectral Graph Theory	15-754	Jason Li, Ryan O'Donnell	
2	Convex Optimization	15-759	Yang Liu	
3	Vector Analysis	21-269	Giovanni Leoni	2
4	Extremal Combinatorics	21-738	Boris Bukh then Wesley Pegden	4
5	Discrete Mathematics	21-701	Wesley Pegden	3
6	Randomized Algorithms	15-756	William Kuszmaul	4
7	Algebraic and Numerical Algorithms	15-495	Richard Peng	3
8	Parallel and Concurrent Algorithms	15-852	Guy Blelloch	4
9	Graduate Complexity Theory	15-855	Ryan O'Donnell	5
10	Algebraic Topology	21-752	Florian Frick	4
11	Matrix Theory	21-242	Wesley Pegden	1
12	Algorithm Design and Analysis	15-451	Richard Peng, Yang Liu	4
13	Parallel and Sequential Algorithms	15-210	Guy Blelloch, Charles Garrod	3
14	Great Ideas in Theoretical Computer Science	15-251	Anil Ada	2
15	Math Foundations for Computer Science	15-151	John Mackey	1
16	Category Theory	80-413	Reid Barton	3
17	Introduction to Computer Systems	15-213	Brian Railing, Phillip Gibbons	3
18	Probability and Computing	15-259	Mor Harchol-Balter, Weina Wang	2
19	Principles of Imperative Computation	15-122	Anne Kohlbrenner, Iliano Cervesto	1
20	Machine Learning	10-301	Matthew Gormley, Bryan Wilder	5
21	Principles of Functional Programming	15-150	Dilsun Kaynar, Michael Erdmann	2
22	Distributed Systems	15-440	C. Garrod, Y. Agarwal, B. Titzer	5

Table 1: A ranking of a subset of classes which I've taken or of which I've watched the lectures. The metric by which they are ranked is some combination of how much I think I benefitted from taking the class and my opinion on some kind of objective quality. Semester starts from 1 at Freshman Fall and counts up. If blank, it means I watched the lectures and did not take the class in person.
